### Cultural Competency Resources

As you make your way towards the culturally competent end of the spectrum, remember that learning is a life-long process. Here are a few resources that may be helpful in learning more about cultural competence and exploring other cultures. (Content courtesy of Susan Horky)

- National Center for Cultural Competence: <http://nccc.georgetown.edu/>  
The National Center for Cultural Competence, located within Georgetown University, is a national leader in cultural and linguistic competency education and training. The National Center web site has a wealth of information and resources. There is a section dedicated to information for families and communities, as well as a section of resource entirely from the family and youth point of view.
- Curricula Enhancement Module Series: <https://nccc.georgetown.edu/curricula/modules.html/>  
A project microsite from the first resource listed above, this site provides four key content areas in important areas within public health: cultural awareness, cultural self-assessment, communication, and public health in a multicultural environment.
- ArcGIS Hub: Popular Demographics in the United States: <https://hub.arcgis.com/maps/esri::popular-demographics-in-the-united-states/about>  
Users can select the layers by which they want to examine data (country, state, county, ZIP, tract, block group), view different attributes (population by age group, income, demographics, number of housing units, own-occupied housing units, etc.), and download the data. This data is updated frequently and open to any user.
